

Email from Daniel – Re: ARPA – Reports attached

Attached is a copy of the draft drainage report with a cost estimate for each related project. As you can see the total cost for all projects is estimated to be \$3,573,539. FEMA Flood Mitigation Assistance Program is a 25% match putting our portion at close to \$900k. We are evaluating the list to see what we can do in house to offset some of the costs. Once identified, we have requested E.L. Robinson submit a phased approach to tackle each of the remaining issues.

In the meantime, we will be seeking any and all funding opportunities through partnerships, grants, etc. to fund this project. I will update Council as more information becomes available. Please let me know if you have any questions or concerns.

In addition, our GIS department has been tasked with turning out several new maps for your consumption. Here is a stormwater map that we are still gathering data on. This link will update as more data is added.
